

SCREW COMPRESSORS

As an approved packager for **Howden** screw compressors, EGSENL understands the importance of designing and engineering equipment fit for purpose.

They are typically supplied in the 60KW to 1MW power range, with electric motor drive, for a range of applications.

Screw compression technology is the key choice in applications where **high availability** and **reliability** is required. Designed to stand up with the most hazardous and corrosive gases, while remaining tolerant to input fluctuations - the screw compressor will deliver a constant pressure output making it the invaluable core for a host of industrial operations.

The screw compressor principle delivers gases smoothly and continuously, at constant pressure, free of sure, twenty-four hours a day, seven days a week, for years on end!
