

CENTRIFUGAL COMPRESSORS

Specializing in **light industrial** and **aero-derivative gas turbine, turbomachinery** and **rotating** equipment products and services, EGSENL provides various levels of support for new and existing packaged equipment.

Package Repurposing: strategically utilizing existing assets for new installations, optimizing functionality and minimizing waste.

Triple Clean Solution: a complete suite of solutions to ensure peak performance and longevity for gas turbine engines covering three vital areas: Gas turbine washing, Lube oil cleaning and Management, and Air filtration solutions.

Field Service Support: On-site technical assistance, troubleshooting, and maintenance to keep gas turbines operating at peak levels.

Parts Supply and Management: Seamless procurement and delivery of high-quality replacement parts, minimizing disruptions during maintenance cycles, supported by comprehensive oversight of spare parts inventory.

Engine, Equipment, Parts Storage, Checks, and Pressurization: Thorough inspections, preservation, and pressurization of gas turbine engines and associated equipment.

Tool Kit Supply and Management: Efficient management of specialized tool kits, ensuring readiness for routine inspections and repairs.
