

# AIR COOLED HEAT EXCHANGERS

Air cooled heat exchangers are the first-choice solution for **natural gas**, **oil** and **water** cooling, in oilfield applications. The finned tube design, improves the heat exchange process, making the technology appropriate for any environment, from low ambient temperatures to desert conditions.

EGSENL air coolers are **designed** and **engineered** in-house to order, offering the most **environmentally** friendly solution.
